

LIVE VIEW

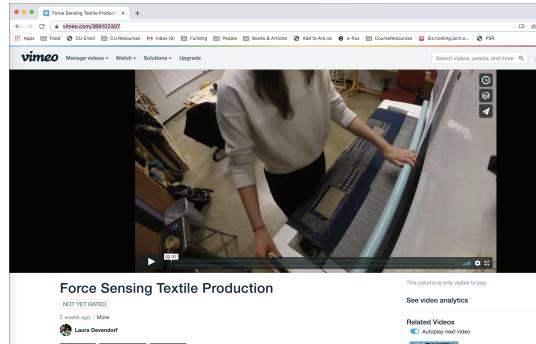

Shows presses on fabric in real-time. Strength of press corresponds to the opacity (red for most force, light pink for least)

HISTORY VIEW

Activity log on the bottom shows the total amount of force exerted upon any region of the fabric by time window.

The regions above change on scroll, indicating how much force has been accumulated upon each region over time. The metaphor here is wear (e.g. how denim becomes lighter in places with most wear).

EXTRA

More documentation to come but you can also open a window to view a video of the textile's production via vimeo
